SEEDLINKS | PASTING THE URL

Welcome back to Topic Tuesdays!

Ready for a fun trip down memory lane? Today, we're revisiting the magical world of seedlinks! We're going to dive into how to avoid placing them incorrectly in our clients' orders. Check out the image below, and let's get started on perfecting our seedlink sorcery!

[09/07/fall-tv-2022-10-best-shows-watch-gigolo-andor/7832771001/ ,
ws-to-watch/](#) , ← Do not place a space or a comma at the end.

When you're pasting the URL of your seedlink, be super careful about extra spaces or where you put the comma. If there's a space and a comma after the slug, your URL might end with a %20 and lead to a dreaded "page not found" error.

Here's the trick: hit the enter key after each URL submission so each link gets its own line. This makes it easier for everyone to read.

And remember, don't put any extra text on the same line as your link. If you need to explain why you're sharing the link, do it on a separate line. This ensures the link stays clickable for the team.

AVOID PAYWALL SEEDLINKS

When choosing your seedlinks, please double-check them on different browsers or in Incognito mode to make sure they're accessible. We've noticed an uptick in seedlinks hiding behind paywalls, which isn't fun for our writers.

Let's keep those seedlinks open and free,

Happy linking! 🚀
